

ABSTRACT OF THE DISCLOSURE

*Ans B1*

A wireless link provides low-cost high-speed communication between a central storage system and a remote system housed preferably in a mobile vehicle such as an automobile or between two mobile vehicles. Data, including musical data in MP3 format, may be automatically downloaded at high transmission speeds from a variety of sources available to the central storage system. Storage and retrieval of data may be accomplished using inexpensive highly compact memories or flash memory cards.
